

INFOPoll® Web Warehouse

Web Based Indexing and Inventory Control System for Imaging Centers

www.agissar.com/infopoll-web-warehouse/

INFOPoll® Web Warehouse

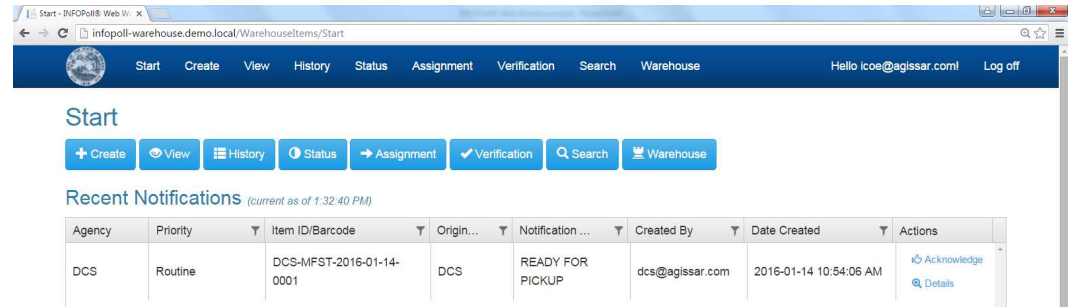

Features and Benefits:

- Configurable – from work flow, to new files and indexes, notifications, and SLA management (no code required!)
- Print linear barcodes and intelligent QR codes
- Automatically index files on your capture device with the data contained in the INFOPoll QR codes
- INFOPoll Web Warehouse API for Imaging Systems – automate tasks such as creation of electronic files, matching indexes and files automatically, status and location updates
- Encryption / Decryption
- Chain-of-Custody controls and reporting
- Manage the entire life cycle of physical documents and their electronic images
- Destruction alerts
- Mobile friendly design
- Flexible Security: Active Directory, Custom LDAP Queries, ASP NET membership, external authentication services

INFOPoll® Web Warehouse

Background:

When the Indiana Department of Revenue was looking to provide imaging services to other State agencies, they needed a very secure inventory control and indexing system that could report on the full life cycle of their clients records. After looking around the marketplace, the State determined that there wasn't a inventory control system that could easily integrate with their imaging system.

As a trusted partner, and the developer of the States work force management system (INFOPoll Enterprise Edition), Agissar's INFOPoll Systems division was asked to develop a web based inventory control and indexing system to manage the creation, indexing, transfer, imaging, retention, and disposition of State Records. The INFOPoll Web Warehouse was developed to not only meet the current needs of the State but also create a flexible platform for future growth.
