

INFOPoll® Enterprise Edition

'Information with an Opinion'

Labor and Transaction Tracking Software for Mailrooms and Scanning Operations

www.agissar.com/infopoll-enterprise-edition

INFOPoll® Enterprise Edition

Automatically capture Operator and Machine data across your operation

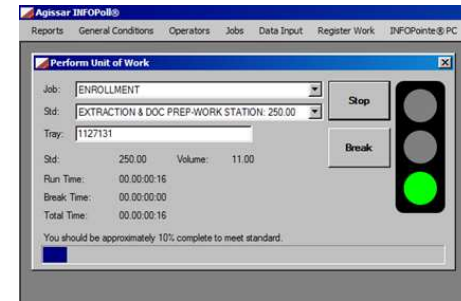

In *real-time*, workers and management receive feedback on how they are performing in comparison to the Reasonable Expectation set for each JOB ID & TASK TYPE. This *real-time* feedback to individual workers foster a self managing environment that *after-the-event* type *production* tracking & *reporting* systems don't address.

As a result workers are motivated to complete tasks *on time* and *within budget*.

INFOPoll® doesn't just track manual and machine processes!

INFOPoll®'s *TRACKER* module allows you to manage the location and handling of physical units-of-work (envelopes, boxes, trays, etc) throughout the entire document life cycle. TRACKER lets you quickly scan accountable mail pieces and packages to manage the location of items and provide chain of custody reporting.

INFOPoll®'s Box Management module allows you to manage the location and retention of short and long term paper storage. You will be alerted when boxes are ready for destruction.
